## Operating Set Points

Off-Cycle Defrost	R-407A	R-448A/R-449A	CO <sub>2</sub>
Time Per Defrost (Minutes)	30	30	30
Drip Time (Minutes)	N/A	N/A	N/A
EPR Settings (psig)	44	51	420
Frequency (Per Day)	6	6	4

### Notes:

- For high-glide refrigerants, use dew point for unit sizing. Adjust evaporator pressure as needed to maintain discharge air temperatures.
- Baseline Evaporator Btu/h based on parallel rack system, 1 row LED canopy lighting and 4 rows LED under shelf lighting (Zero Zone ChillBrite®), ECM or SSC electronic fan motors, 4 tiered rows of solid shelves, and low sill height.
- Discharge air temperature is measured at the outlet of the honeycomb.
- Discharge air velocity is average velocity at peak of defrost.
- A 3-prong round pin receptacle is provided for auxiliary ventilation fan kit.
- Electrical data based on 1 row LED canopy lighting and 4 rows LED under shelf lighting (Zero Zone ChillBrite®), ECM or SSC electronic fan motors, 4 tiered rows of solid shelves, low sill height, and auxiliary ventilation fan kits. Contact Zero Zone for data without ventilation fans.

- 115V 3-wire service; 115V-1PH-60HZ; black power, white neutral, green ground. Buck/ boost transformer available for low voltage conditions.
- MOCP = Maximum over-current protection.
- MCA = Minimum current amps.
- Use 0.5 lb/ft evaporator refrigerant charge for receiver sizing.

### Case Performance Notes:

- Btu/h load increases by approximately 120 Btu/h per foot for aftermarket shelving/merchandising.
- Operating temperature and defrost set points may need to be adjusted for alternate shelving, store conditions, or packout.
- A minimum 20° evaporator is recommended without positive defrost.
